### **The latest evolutionary step of statistical process control: the new Mitutoyo MeasurLink 9 software**

The Mitutoyo quality data management software MeasurLink has long been the pinnacle when it comes to Statistical Process Control (SPC). Now the ground-breaking, versatile IoT suite enters the market in a new generation. It features, among many others, the outstanding new IoT feature “MT Connect” and the practical Real-Time Dynamic Gage Data.

**Neuss, March 2019.** The tried and tested Mitutoyo MeasurLink software family has since its first release been popular in all branches for being the perfect instrument for effective statistical process control. The suite is especially renowned for its real-time data collecting capability from Digimatic measuring instruments as well as its data analysis and network monitoring components. It delivers a safe and organised data warehousing system making quality data available for viewing and analysis by any member of production, engineering and managerial staff throughout the company.

The brand-new MeasurLink Version 9 constitutes a consistent further development of its predecessor, including revolutionary new IoT functions such as “MT Connect” that enables direct access and numerical data streaming from DAQ sources anywhere in the world via a web URL, without the need to connect to a remote database. “Real-Time Dynamic Data” is the name of a new feature that takes care of charting and collecting dynamic measuring data at high sampling rates and of discrete recording. Streaming (current) data is displayed by a dynamic meter and a dynamic indicator bar. This new component also offers recording of the Max/Min values during dynamic capturing as well as a timed sampling function. The powerful Process Analyzer supervisory tool now comprises the new “What-If” function that can analyse hypothetical scenarios like tolerance changes, data tests and derived characteristics, hence boosting process stability.

MeasurLink 9 also boasts a number of comfortable new functions that save time and effort. “Windows Active Directory Support” adds pre-definable MS Windows users or user groups to get assigned MeasurLink rights. This renders a separate MeasurLink login unnecessary. Databases can be backed up and restored from the MeasurLink console now. Applying the MS Management Studio for this task is a thing of the past.

Like its predecessor, MeasurLink 9 is available in several modules. The customer can create his own bundle of software components and licence packages that suit his requirements. The software comes with the appropriate Microsoft SQL Server Express Edition and supports the Microsoft SQL Server versions 2014, 2012 and 2008. MeasurLink 9 is compatible with most Windows 7, 8 and 10 versions in the 32-bit and 64-bit releases.
